

Build Steps

Part 1 of 5 — Set up the agent, orchestration, and knowledge

1 Create Your Copilot Studio Agent

Open Copilot Studio (copilotstudio.microsoft.com), select Create → New agent, then configure:

Agent Name	Marketing Campaigns Copilot
Description	Marketing managers track campaign performance and request new campaign briefs in conversation; demand-gen specialists get instant ROI views.
Solution / Environment	Marketing Solution · Default environment
Icon	Use a recognisable colour and emoji or upload a brand icon

2 Choose Orchestration Mode

Under Settings → Generative AI, choose how the agent decides what to do:

Generative Orchestration

Recommended — AI-led

- Agent reasons over user input and picks the right topic, tool, or knowledge
- Handles paraphrases, multi-step asks, and follow-ups naturally
- Best for varied user intent and exploratory questions
- Requires clear instructions, tool descriptions, and good knowledge

Classic Orchestration

Deterministic — trigger-led

- Topics fire on explicit trigger phrases you author
- Predictable flows, easier to audit step-by-step
- Best for tightly-scoped, regulated, or compliance-critical journeys
- Less forgiving of phrasing the author didn't anticipate

For this build we use Generative Orchestration so the agent can blend knowledge lookups with tool calls for marketing performance and campaign brief intake.

3 Add Knowledge

Go to the Knowledge tab → Add knowledge → File, then upload Marketing_Campaigns_Data.xlsx. This file contains:

- Campaign details (name, channel, region, owner, status)
- Time data (start date, end date)
- Investment (budget, actual spend)
- Performance (impressions, clicks, CTR, MQLs, SQLs, opportunities)
- Outcomes (pipeline generated, ROI)

You can layer additional sources later — SharePoint sites, Dataverse, public web, or Graph connectors.

Build Steps

Part 2 of 5 — Add instructions and a custom topic

4 Add Agent Instructions

Open Overview → Instructions and paste the following (these guide the model regardless of orchestration mode):

```
You are the Marketing Campaigns Copilot. You help two audiences:
1) Marketing managers reviewing performance across the portfolio.
2) Stakeholders requesting a new campaign brief.

Rules:
- Use the uploaded campaign data as your single source of truth for analysis.
- For analytical questions, calculate ROI as (Pipeline - Spend) / Spend.
- For new brief requests, call the 'Create Campaign Brief' tool.
- Always be clear about campaign status (Live / Complete / Planned / Paused).
- Never disclose another region's spend if the user is scoped to a region.
```

5 Add a Custom Topic

Go to Topics → Add a topic → Create from description. Topics are reusable conversation flows the agent can call when intent matches.

```
Topic name: Request a Campaign Brief
Description: Captures a structured campaign brief from a business stakeholder and
files it as a Planner task for the marketing team to action.

Trigger phrases (Generative Orchestration uses these as intent hints,
Classic mode uses them as exact triggers):
• I need a campaign for the new product
• Request a campaign brief
• Help me run a campaign in DACH
• We need marketing support

Conversation steps:
→ Ask for: campaign objective, audience, region, target launch date
→ Ask for budget envelope and preferred channels
→ Summarise the brief back to the user and ask to confirm
→ Call the 'Create Campaign Brief' tool to file the request
→ Return the Planner task URL and the marketing PM assigned
```

Build Steps

Part 3 of 5 — Add a tool and configure settings

6 Add a Tool

Tools let the agent take an action, not just answer. Go to Tools → Add a tool, and choose one of:

- Prebuilt connector (Outlook, Teams, SharePoint, Dataverse, ServiceNow, etc.)
- Power Automate cloud flow (custom logic you author or already own)
- Custom HTTP request (any REST API your agent can reach)
- Model Context Protocol (MCP) server — for richer tool ecosystems

Tool name: Create Campaign Brief

Type: Power Automate flow → Planner task + Teams notification + SharePoint record

Description: Files a structured campaign brief and notifies the marketing team.

Inputs the agent will collect or infer:

- Objective (string)
- Target audience (string)
- Region (string)
- Launch window (date range)
- Budget envelope (number)
- Preferred channels (multi-select)

Outcome: Returns the Planner task URL and assigned marketing PM.

7 Configure Settings

Open the Settings cog (top right). Configure these four areas before you let real users near the agent:

- General — confirm name, description, and primary language
- Generative AI — orchestration mode and content moderation level (start at Medium)
- Authentication — use 'Authenticate with Microsoft' so the agent runs as the signed-in user
- Security — review DLP policy, enabled channels, and end-user authentication

Build Steps

Part 4 of 5 — Evaluate, test, and publish to a channel

8 Evaluate Your Agent

Go to Analytics → Evaluations → New evaluation. Build a test set so you can measure quality before and after every change.

Test set name: Marketing Campaigns Copilot – Baseline v1
Approach: Pair each input prompt with an expected outcome.
Run the evaluation and review three scores per response:

- Groundedness – did the answer stay inside the knowledge?
- Relevance – did it actually address the question?
- Accuracy – did it match the expected outcome?

Sample evaluation items:

Input: Show me the top 5 campaigns by ROI

Expect: Calculates ROI per row and returns top 5 with channel and region.

Input: Which channel generates most pipeline per euro spent?

Expect: Sums pipeline and spend by channel, ranks by ratio, shows working.

Input: I need a brief for an EMEA security suite launch in Q3

Expect: Triggers Request a Campaign Brief topic and calls the tool.

9 Test in the Test Pane

Use the Test pane (right side of the canvas) while you build. For each query, click Activity map to inspect what the agent did:

- Which topic, tool, or knowledge source fired (and in what order)
- Inputs the agent collected and outputs the tool returned
- Citations linking each answer back to a row of your knowledge file
- Latency per step — useful when tuning multi-tool flows

10 Publish to a Channel

When you're happy, click Publish (top right). Then open Channels and enable the surfaces your users live in:

- Microsoft Teams — submit for admin approval, then pin to a team or chat
- Microsoft 365 Copilot — surface the agent inside Copilot Chat for licensed users
- Custom website — copy the embed snippet for an intranet page
- Other channels — Slack, Facebook, Telephony (Azure Communication Services)

Teams and M365 Copilot channels require tenant admin approval before users see the agent — plan for that lead time.

Try These Live

Part 5 of 5 — Sample queries to test your agent during the build-along.

Performance

Top 5 campaigns by ROI, with channel and region.
Which Live campaigns are tracking over 90% of their budget?

Funnel & Channel

Show MQL to SQL conversion rate by channel.
Which region has the strongest pipeline-to-spend ratio?

Brief Intake

I need a campaign brief for a new product launch in DACH next quarter.
Request marketing support for a partner co-sell event in Iberia.

How to Think About This Agent

This agent replaces:

- Pulling reports from multiple ad platforms
- Email-based intake of campaign requests
- Hand-built ROI calculations

With:

- ✓ ROI and pipeline impact answered in chat
- ✓ Structured briefs flowing straight into Planner
- ✓ Faster, more confident investment decisions

Trusted, governed, enterprise AI — built once, used everywhere.

Tip for real-world use

Use a single Evaluation test set with your tier-1 KPIs (ROI by channel, spend-to-pipeline, MQL→SQL rate). Run it before every prompt change so you catch regressions before stakeholders do.

You've built a Copilot Studio agent ✓

You now have an AI agent that can:

- Answer marketing performance questions
- Surface ROI winners and laggards
- Capture briefs as Planner tasks
- Speed up campaign request intake
