

Build Steps

Cowork is task-driven — give Copilot a job, optionally schedule it, let it use your M365.

1 Open Copilot Cowork

Open Microsoft 365 Copilot and switch to Cowork mode (left rail). Confirm the surfaces you have available — Cowork can act on your behalf across:

- Outlook (read, summarise, draft, send, schedule)
- Teams (chats, channels, post messages, read history)
- Calendar (find times, create meetings, prep briefs)
- SharePoint & OneDrive (read files, write Word/Excel/PowerPoint to your files)
- Power BI (semantic models, reports, DAX queries)

2 Paste the Headline Task

Open a new Cowork task and paste the prompt below. This is the worked example for Customer Service — adapt names, channels, and Power BI reports to your tenant before running.

Every weekday at 8:00am, run the Overnight Escalation Digest:

1. Scan for new escalations from the last 16 hours across:
 - My mailbox (subject contains 'escalation', 'urgent', 'down', 'P1', 'outage')
 - The 'CS Escalations' Teams channel
 - The 'Customer Service Cases' Power BI report (cases where Escalated = Yes and opened in the last 16h)
2. Deduplicate — same customer + same product = one item.
3. For each, list: customer, product, priority, channel of report, first response status, owning agent.
4. Post the digest to the 'CS Leadership' Teams channel ranked by priority. Include a 'Needs leadership action' section for anything still unowned after 4 hours.
5. Do NOT post automatically — leave as a draft.

3 Set the Schedule

In the task panel, choose Schedule and configure:

Frequency	Weekdays
Run Time	08:00 GMT (before queue handover)
Execution Mode	Inline (recommended) — task remembers context across runs

4 Verify the First Run

Run once now (Run now) before scheduling kicks in. Confirm:

- Same case from email + Teams + Power BI is deduplicated, not tripled
- Priority ranking matches the Power BI priority field
- 'Needs leadership action' is empty most days (otherwise tune the rule)
- The Teams draft is in the right channel and reads cleanly

Try These Live

Copy any of these into a new Cowork task — one-shot or scheduled.

Reply Quality Review

Read the last 50 reply emails from my mailbox to customers. Identify repeated phrases I overuse, openings that feel robotic, and replies under 3 sentences that probably needed more care. Save a Word doc with examples and a short coaching note.

CSAT Root-Cause Pack

From the 'Customer Service Cases' Power BI report, list every case with CSAT below 3 in the last 30 days. For each customer, search my mailbox for follow-up correspondence. Per customer: case ID, low-score reason from CSAT comment, any follow-up, suggested next action. One Word doc.

Weekly Capacity Read

Every Friday at 3pm: from the Power BI report, count open cases per agent and average age. Flag agents with more than 12 open cases. Draft a Teams message to me with the table and 2 suggested re-assignments. Leave draft.

How to Think About This Teammate

Cowork replaces:

- 8am scramble to read overnight escalations
- CSAT root cause as a quarterly project
- Manager-by-instinct on agent load

With:

- ✓ An 8am digest already filtered and ranked
- ✓ CSAT root-cause built on real correspondence
- ✓ Capacity signals every Friday, not every quarter

Not a chatbot. A scheduled teammate with full access to your M365.

Tip for real-world use

Add a final step to the digest task: 'If any P1 case is unowned after 30 minutes, send me a direct Teams message with the case ID.' Cowork's scheduled tasks support follow-on actions — turning a passive digest into an active early-warning system.

You've built a Cowork teammate ✓

You now have a Copilot teammate that can:

- Triage escalations across email, Teams, CRM
- Build CSAT root-cause on real evidence
- Catch P1 ownership gaps in minutes
- Manage agent load with weekly signal
