

Build Steps

Cowork is task-driven — give Copilot a job, optionally schedule it, let it use your M365.

1 Open Copilot Cowork

Open Microsoft 365 Copilot and switch to Cowork mode (left rail). Confirm the surfaces you have available — Cowork can act on your behalf across:

- Outlook (read, summarise, draft, send, schedule)
- Teams (chats, channels, post messages, read history)
- Calendar (find times, create meetings, prep briefs)
- SharePoint & OneDrive (read files, write Word/Excel/PowerPoint to your files)
- Power BI (semantic models, reports, DAX queries)

2 Paste the Headline Task

Open a new Cowork task and paste the prompt below. This is the worked example for Marketing — adapt names, channels, and Power BI reports to your tenant before running.

Every Monday at 7:00am, run the Campaign Read-Out:

1. Read the 'Marketing Campaigns' Power BI semantic model. For every Live campaign, pull: budget, spend, CTR, MQLs, SQLs, pipeline generated, ROI.
2. Rank campaigns by ROI. Identify any Live campaign that has spent more than 80% of budget but generated less than 50% of its expected pipeline.
3. Search my mailbox for the last 7 days for any campaign-related issues (channel reps, agency, partner) that might explain underperformance — pull short quotes.
4. Draft an email to the marketing leadership distribution list: top 3 performing campaigns, bottom 3, the at-risk list with quotes, and 3 suggested actions for this week.
5. Leave the email as a draft.

3 Set the Schedule

In the task panel, choose Schedule and configure:

Frequency	Weekly
Run Time	Monday 07:00 GMT (before Mon AM standup)
Execution Mode	Inline (recommended) — task remembers context across runs

4 Verify the First Run

Run once now (Run now) before scheduling kicks in. Confirm:

- ROI calculation matches your Power BI ROI field exactly
- The 'at-risk' rule fires sensibly — try forcing a known case
- Email evidence quotes are real and traceable
- The draft is in your Drafts, addressed to the right DL

Try These Live

Copy any of these into a new Cowork task — one-shot or scheduled.

Brief Template Harmoniser

Read the last 20 campaign briefs from /Marketing/Briefs/ in SharePoint. Identify the 4 sections everyone fills in and the 4 sections half the team skips. Build one new standardised Word template – short, clear, with prompts. Save to /Marketing/Templates/Brief Template v2.docx.

Event ROI Pack

I'll paste an event campaign ID. Pull its Power BI numbers (spend, MQLs, SQLs, opps, pipeline). Find every email in my mailbox tagged with that event or its name. Build a 5-slide deck: investment, lead funnel, top 5 opps generated, attendee feedback themes, ROI verdict.

Reactivation Outreach Drafts

From Power BI, list the 25 lapsed accounts with the highest historical pipeline. For each, search my mailbox for the most recent thread. Draft a personalised, light-touch reactivation email referencing the last conversation. Leave 25 drafts.

How to Think About This Teammate

Cowork replaces:

- Monday morning dashboard scramble
- Brief intake spread across 6 versions of the template
- Bulk-mailer reactivation that gets nobody back

With:

- ✓ A pre-built Monday read-out by 7:30am
- ✓ One brief template, harmonised from real data
- ✓ 25 personalised drafts, not 25 form letters

Not a chatbot. A scheduled teammate with full access to your M365.

Tip for real-world use

Marketing data has the most volatility week to week. Don't fight it — schedule the read-out on a fixed cadence and instruct Cowork to flag 'unusual movement' (any KPI shift >25% from the previous run). Treat the consistency as a feature; trust the flags.

You've built a Cowork teammate ✓

You now have a Copilot teammate that can:

- Run the Monday read-out automatically
- Personalise outreach at scale
- Catch budget burn before it's wasted
- Replace template chaos with one brief
