

Build Steps

Cowork is task-driven — give Copilot a job, optionally schedule it, let it use your M365.

1 Open Copilot Cowork

Open Microsoft 365 Copilot and switch to Cowork mode (left rail). Confirm the surfaces you have available — Cowork can act on your behalf across:

- Outlook (read, summarise, draft, send, schedule)
- Teams (chats, channels, post messages, read history)
- Calendar (find times, create meetings, prep briefs)
- SharePoint & OneDrive (read files, write Word/Excel/PowerPoint to your files)
- Power BI (semantic models, reports, DAX queries)

2 Paste the Headline Task

Open a new Cowork task and paste the prompt below. This is the worked example for Sales — adapt names, channels, and Power BI reports to your tenant before running.

Every Friday at 5:00pm, run my Pipeline Prep:

1. Look at my calendar for next week. List every customer-facing meeting (external attendees only).
2. For each meeting, pull the last 3 email threads with that account in my mailbox AND the most recent Teams chat references.
3. From the 'Sales Pipeline' Power BI report, find that account's open opportunities — stage, amount, probability, last activity.
4. Build one short prep brief per meeting (max half a page): account context, latest signal from email/chat, deal status, 3 sharp discovery or progression questions tailored to the stage.
5. Save all briefs as a single Word doc to OneDrive in /Sales/Weekly Briefs/Week of <date>.docx and email me the link.

3 Set the Schedule

In the task panel, choose Schedule and configure:

Frequency	Weekly
Run Time	Friday 17:00 (ready before Monday)
Execution Mode	Inline (recommended) — task remembers context across runs

4 Verify the First Run

Run once now (Run now) before scheduling kicks in. Confirm:

- It found ALL customer-facing meetings (not internal ones)
- Each brief has email evidence, not generic blurb
- Power BI deal data matches what you see in CRM
- Word doc is in OneDrive and the email link works

Try These Live

Copy any of these into a new Cowork task — one-shot or scheduled.

Stalled Deal Sweep

Search my Sent Items for the last 30 days for threads where I asked about pricing, contract, or next steps — and there has been no customer reply in 7+ days. List them with last-reply dates. For each, draft a short, value-led follow-up email. Leave drafts.

Pipeline Review Pack

Read the 'Sales Pipeline' Power BI report. Build a 6-slide deck for my pipeline review: pipeline by stage, weighted forecast, top 5 deals, slipping deals (close date in the past), stalled deals (no activity 21+ days), 3 things I should focus on next week.

Account Refresh Brief

I'll paste an account name. Pull the last 90 days of email and Teams with that account, plus their Power BI open opportunities. Build a one-page Word brief: recent themes, champions, risks, suggested next 3 steps.

How to Think About This Teammate

Cowork replaces:

- Sunday-night meeting prep across 5 tools
- Forgetting which deal is slipping until forecast call
- Generic follow-up emails because you're rushed

With:

- ✓ A pre-staffed week of customer prep by Friday 6pm
- ✓ Slippage and stall signals every Friday
- ✓ Sharper, grounded follow-ups in your drafts

Not a chatbot. A scheduled teammate with full access to your M365.

Tip for real-world use

Pair this with your CRM nightly. Ask Cowork to verify deal stage in Power BI against what you've said in email — if your last note to the customer says 'reviewing the proposal' but the CRM stage is still Qualify, surface that mismatch. Forecast hygiene becomes automatic instead of a Friday slog.

You've built a Cowork teammate ✓

You now have a Copilot teammate that can:

- Prep every customer meeting end-to-end
- Build review packs without copy-paste
- Catch stalled deals while they're recoverable
- Spend Mondays selling, not prepping
